

PeerGFS

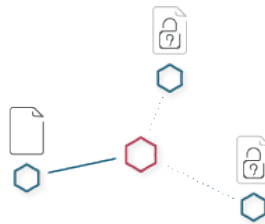

PEER GLOBAL FILE SERVICE

UNIFIED FILE SERVICES FOR A MULTI-SITE, MULTI-VENDOR & MULTI-CLOUD WORLD

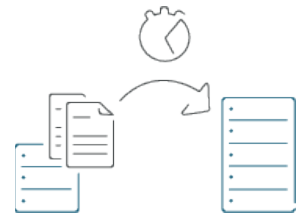

BRANCH OFFICE BACKUP

Real-time Backup & High Availability
Cloud Backup

COLLABORATION

CAD Collaboration
File Collaboration

SYNCHRONIZATION

Real-time Synchronization
Home Directory Synchronization

POWERFUL DATA MANAGEMENT FOR THE ENTERPRISE

PeerGFS is a software-based enterprise solution that integrates with and interconnects disparate on-premises and cloud storage platforms to solve file service challenges customers face in multi-site, multi-vendor, and multi-cloud storage environments.

It creates a unified globally accessible file system to provide all users with fast local access to their data while simultaneously enabling continuous data protection and high availability.

Powered by Peer's innovative DFSR+® technology, PeerGFS combines decades of proven capabilities found in its Peer-Link and PeerSync products with a centralized management console. As the foundation for Peer solutions, DFSR+ enables real-time data replication while utilizing distributed file locking to prevent version conflicts in collaborative environments where shared project files exist in multiple locations.

WHY PEER GLOBAL FILE SERVICE IS A GAME-CHANGER

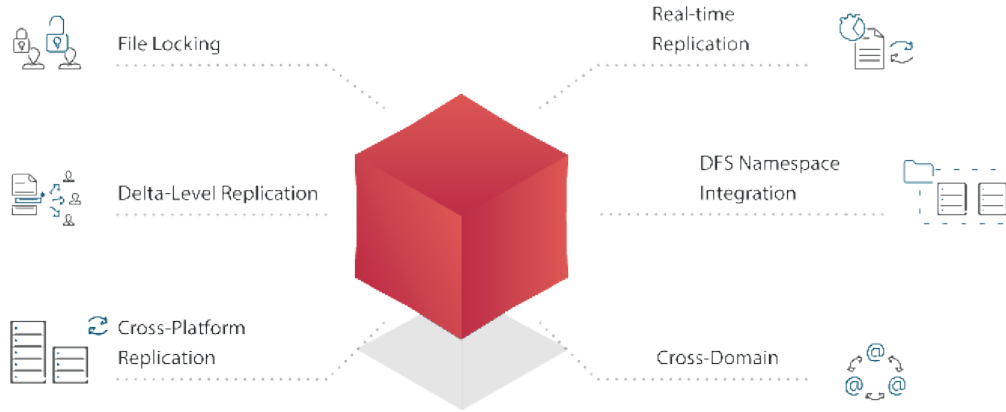

PeerGFS maximizes efficiency by keeping hot data local, close to the users, their applications and computing resources. Additionally, it provides the flexibility to choose, copy or move data workloads across different storage platforms or cloud environments.

This flexibility extends to future storage decisions and purchases as well, thanks to a software-based approach which eases integration with new storage systems.

IT administrators can easily install and configure PeerGFS in a short amount of time. It is non-disruptive as it integrates on top of existing on-premises and cloud-based storage and scales well alongside the storage infrastructure.

POWERED BY DFSR+® TECHNOLOGY

DFSR+® is a patented and trademarked framework of file replication and synchronization technologies from Peer Software that enables contemporary data management practices in a multi-site, multi-vendor, and multi-cloud environment.

BENEFITS

FLEXIBLE

Integrates with existing on-premises storage infrastructure.

EASY

Software-only solution, easy to install and to deploy to hundreds of sites. No end user training required.

PRODUCTIVE

Maximizes employee productivity by keeping hot data local, close to the users, their applications and computing resources.

CLOUD INTEGRATION

Integrates with leading public and private cloud storage platforms from Microsoft, Amazon, Scality and more.

COST EFFECTIVE

Reduces the cost for branch office backup by using real-time replication into the Data Center.

HIGH AVAILABILITY

Minimized RPO (recovery point objective) and RTO (recovery time objective) due to real-time replication and DFS namespace integration.

ABOUT US

Founded in 1993, we develop data management solutions that address unique challenges related to data backup, replication and file collaboration in multi-site (WAN) environments.
