ORGANIC ALLIANCE

ORGANIC WHOLESALER AND DISTRIBUTOR OF FRESH ORGANIC PRODUCTS

The Company

Organic Alliance is a historical player in the distribution of organic fruits and vegetables and fresh products.

Boasting over 30 years of experience as an organic wholesaler, Organic Alliance has successfully developed its own brands, setting industry benchmarks for quality and reliability. These achievements have been made possible through the cultivation of long-lasting partnerships with local farmers and suppliers, thus creating a seamless and ethical supply chain. Our commitment to these values has not only enabled us to maintain a loyal customer base but has also paved the way for future innovations in the organic food sector.

The Challenge

In our company, managing files from multiple physical locations has always been a challenge. The teams, spread out geographically, had to handle large files depending on their services (Marketing, data analytics).

The primary goal was maintaining smooth communication between the distant sites. The second one, with the growing size of files for our different departments, was to relocate these files as close as possible to the end user. This is where PeerGFS comes in. It handles file lock and synchronization, along with the capacity to deploy new servers in an easy way.

Project Profile

PEER SOFTWARE SOLUTION

▶ PeerGFS

CUSTOMER'S PLATFORM(S)

▶ Microsoft Windows
▶ Dell Powerscale

LOCATIONS

▶ 7 Locations

INDUSTRY

▶ Sales

APPLICATIONS

▶ Adobe Photoshop
▶ Adobe InDesign
▶ Adobe Illustrator
▶ Microsoft Office

Solution

We decided to implement the PeerGFS solution on all our file servers. We chose a primary one to be the reference for the first deployment.

After a simple configuration with the aid of Peer's support, we were able to add other file servers on both virtual and physical hardware. The file filtering integrated into the PeerGFS solution allows us to prevent certain files from being replicated among the servers, preventing unnecessary space consumption and reducing bandwidth requirements.

Results

The results have been exactly what we asked for. The real-time file lock is a precious feature, stopping all versioning issues across the company.
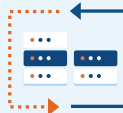

After the initial folder replication configuration, administration and updating of the PeerGFS solution were smooth. The software management console allows easy deployment of new servers and managing folder replication according to local users' needs. The user satisfaction after the implementation of this solution was positive, with direct local file access for people working at multiple sites.

Benefits

FAST FILE ACCESS
Improve Productivity for distributed teams by enabling fast local access to shared project files.

CROSS PLATFORM
Replicate Data between the Storage Systems which best meet specific application / business requirements.

FILE LOCKING
Enable fast, local access to shared file data without the risk of version conflicts

NO VENDOR LOCK-IN
Non-proprietary, software-based solution supports native file and object formats.

ABOUT US

Since 1993, Peer Software has developed data management solutions that address unique challenges related to data synchronization, backup, and file collaboration in multi-site (WAN) environments.
